

The Museum of Ixelles is pleased to present the exhibition
El Cubismo
Cubism and its context from the Fundación Telefónica art collection

➤ From 5 February to 25 April 2010

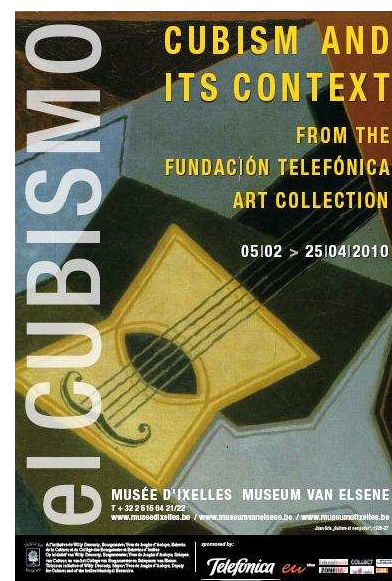

Cubism spearheaded the most significant and forward thinking movements of the 20th century. Born from the union of Cézanne's theories and the influence of Arts Premiers, cubism shattered the artworld of 1907 and was of considerable influence to many artists.

Initiated by the Telefónica Foundation, the exhibition presents a distinct and original selection of work from French, Spanish and Latin-American artists, between 1907 and 1924.

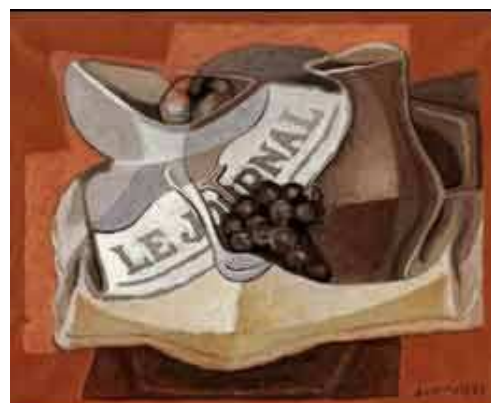

The paintings of Juan Gris, Natalia Gontcharova, André Lhote hang alongside those of Rafael Barradas, Louis Marcoussis and Albert Gleizes. Portraits, still life and landscapes wander away from reality and break from traditional perspective and form. Some paintings come close to abstraction, others reinterpret everyday objects as in Juan Gris' «Guitar and Fruitbowl». An exhibition to discover, or rediscover, an influential section of modern art history through the work of both known and unknown artists, both with quality and worth.

Exhibition Commissioned By: Eugenio Carmona, Malaga University.

Exhibition organised in collaboration with the Telefónica Foundation in Madrid.

For this exhibition, the Museum of Ixelles offers:

Juan Gris, *La grappe de raisins*, 1925

Museum Night Fever
